

01

Profile

I find companies their next customers, and
I carry the number until the revenue lands.

I make companies money by finding them the customers they cannot find themselves, across finance, SaaS, healthcare and media. The part that matters is subtraction: **I can tell you which accounts I took off the list, and why.** I do not hand over a list and walk away. I built the CRM my last team ran on, plus the research pipeline, contact verification, follow-up sequencing and reporting behind it, then ran them and owned the target myself. I also write and render the campaign films that go out with the outreach. If something in the funnel breaks, I can go and fix the code.

Experience

2026

• Present

Lead Generation Specialist

US media & creative company · Remote

- Run the **end-to-end outbound engine**: account research, contact verification, sequencing and meeting booking. **Reference available on request.**
- Compensated **per booked meeting plus commission**, paid on the same metric the pipeline is measured on.
- Built the infrastructure behind the numbers: automated two-touch follow-up sequences (Gmail API + Google Sheets), a daily draft-and-review workflow, and research pipelines with enforced zero-duplicate lead verification.

Business Development Executive

PAN Finance · Remote

- Generate and qualify leads for PAN Finance's financial products through structured outreach and prospecting; analyse market trends and competitor activity to spot new growth opportunities.
- Built **PF Team Ife**, the internal Next.js / Supabase lead-generation CRM now used by a 10-person team across ten award and media brands; it has screened **90,000+ companies** and processes lead batches of **up to 5,000 with an 8-step eligibility check.**
- Track and report pipeline metrics (leads generated, meetings booked, conversion rates, revenue) and automate the data entry and reporting the team previously did by hand.

Freelance Automation Developer

Self-employed · Remote (US and UK clients)

- Built and shipped production automation systems independently, full stack: from database design to web UI to CLI to API integration.
- Run an automated real-estate market-intelligence pipeline (n8n + Apify + Claude) that has operated **daily since March 2025**, scoring listings from five sources and delivering a morning briefing email.
- Integrated Anthropic, OpenRouter, Google Maps Places, Gmail SMTP, Paystack, n8n, Playwright, and Supabase into client-facing and internal tools; scoped multi-milestone contracts via Upwork with proof-of-work demos.

Sales Representative, Lead Generation

BuildingYourBusiness.Online · Remote

- Ran outbound for a digital-marketing SaaS via cold email, LinkedIn, and job-board prospecting; closed recurring subscription clients and hit revenue targets.
- Coordinated with international teams over Slack. The volume of manual outreach in this role is what pushed me to start building the automation systems below.

03 Selected projects & systems built

npì-triggers, Open-Source Prospecting Tool 2026

Finds US healthcare organisations that *recently changed*, from the federal CMS provider registry: newly created entities, and established records that just moved. No API key, standard library only. First run returned **789 organisations** across two states, **79** carrying a dated change, and discarded the **38%** the registry returns on a mailing rather than a practice address. The README leads with what the data *cannot* establish, because a changed record never says what changed.

Python · CMS NPES API · MIT · github.com/phenomenon/npì-triggers

Lead Generation Engine 2025

B2B lead-discovery engine with dual-mode scraping (Maps API primary, Playwright fallback). Crawls 8 URL paths per site; 11-rule email validation; Flask export dashboard.

Python · Playwright · Maps Places API · SQLite · Flask

PF Team Ife, Lead-Generation CRM & Sourcing Pipeline 2025

The CRM a 10-person team across ten award and media brands runs on, built end to end. Lead records with stage tracking and brand-level ownership, role-based permissions, CSV ingest, an 8-step eligibility and zero-duplicate check, and the reporting the team used to keep by hand. Has screened **90,000+ companies**, in batches of up to **5,000**. Spec, schema, front end and deployment all mine.

Next.js 14 · TypeScript · Tailwind · Supabase · Framer Motion · Netlify

Weekly Lead-Gen Reporting Model 2026

Cost per lead, per qualified lead and per signed case by channel across paid search, paid social, aggregators, affiliates and broadcast. **122 live formulas, zero formula errors**, validated by recalculation rather than by eye. A benchmarks tab sources every figure to named published research, including one published figure *excluded*, with the reason written out.

Excel · openpyxl · Python · formula validation

Campaign Films & Pitch Reels, Coded
Not Edited

2026

Eleven films written, built and rendered in 2026, across industrial drawing data, consumer AI hardware, enterprise AI governance, software intelligence, voice AI for contact centres, on-demand legal, business-address infrastructure, technical staffing, agritech, AI agent marketplaces and US healthcare billing. Research, script, design, build, sound and render all mine on every one. Each is argued from public record and **names the companies it disqualifies on screen, with the reason attached.** The strongest cuts a federal registry pull of 789 organisations down to four, and holds the removals longest. Built as HTML and CSS scenes and rendered headless through a Node pipeline I wrote: scene timing, sound design, music mix, and social cuts from a single master.

HTML & CSS · Node · Puppeteer · FFmpeg · sound design · youtube.com/@hola_gmi
